    }

print("1: Search a Contact, 2: Display all, 3: Extract multiple numbers")
n = int(input("Enter your choice: "))

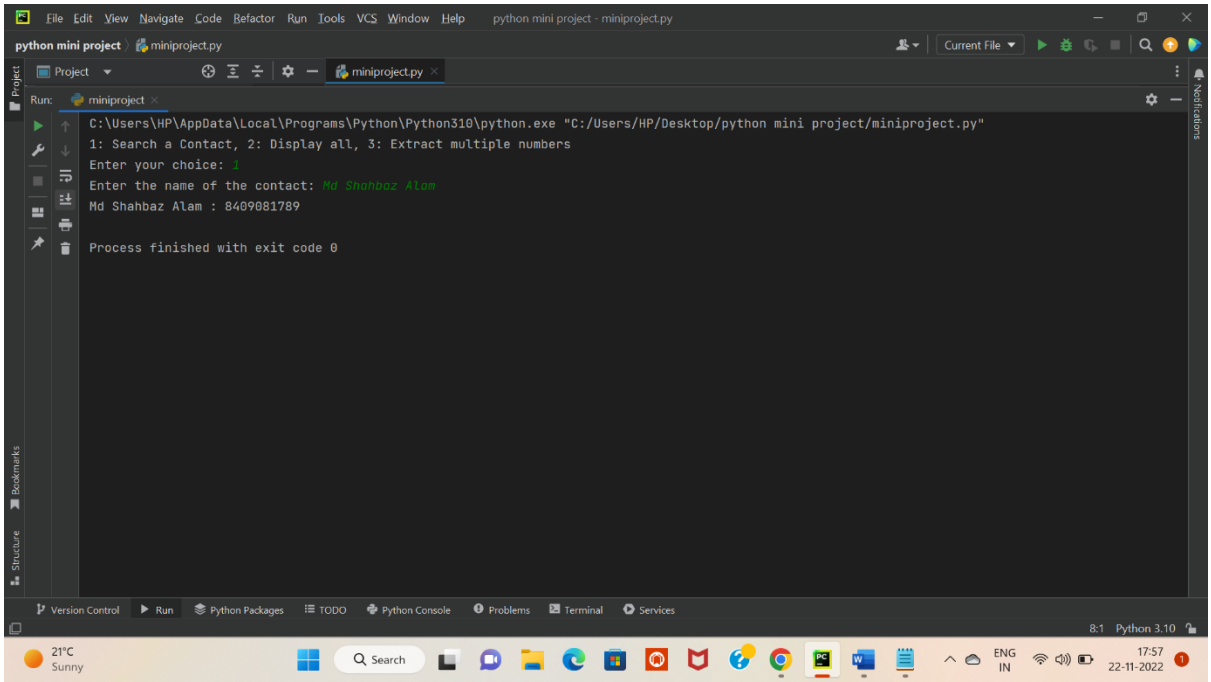
if n ==1:
   t = input("Enter the name of the contact: ")
   name  = dict.get(t)
   print(t ,':' ,name)
elif n ==2:

   print(dict)

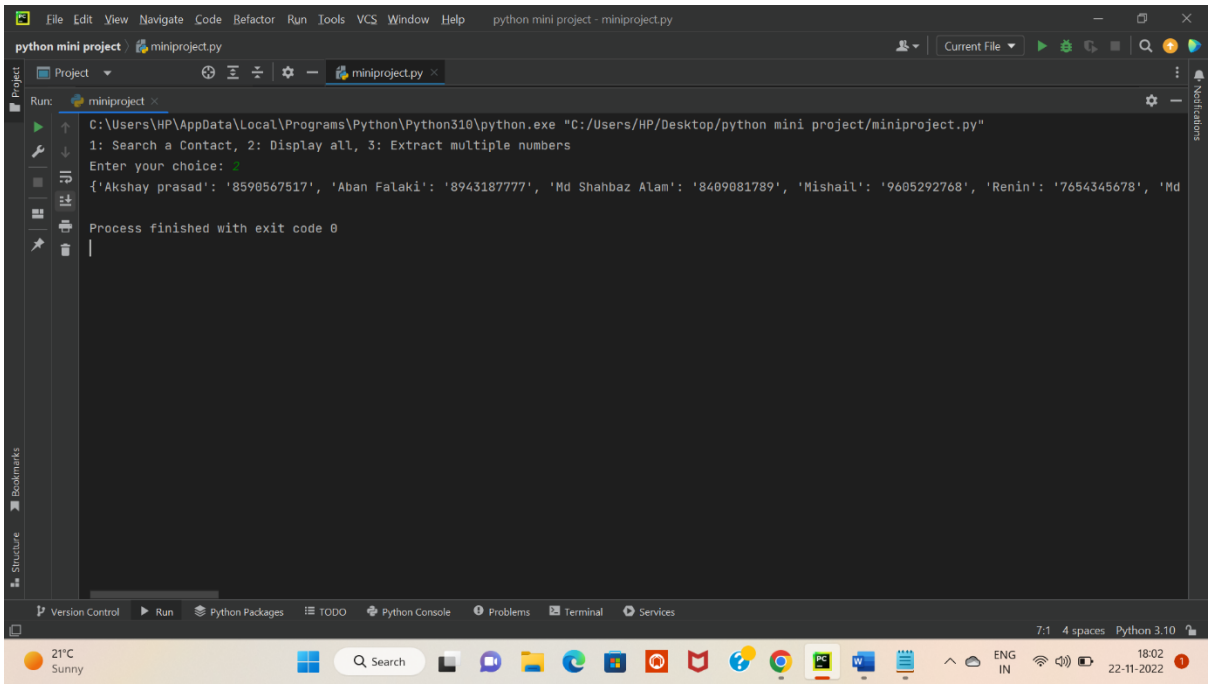
elif n ==3:
```

```
    x = int(input("Enter the number of contacts to extract: "))
    l = []
    for i in range(x):
        name = input("Enter the name of the contact: ")
        a = name + " :  " +dict.get(name)
        l.append(a)
    print(l)
else:
    print("Wrong input")
```

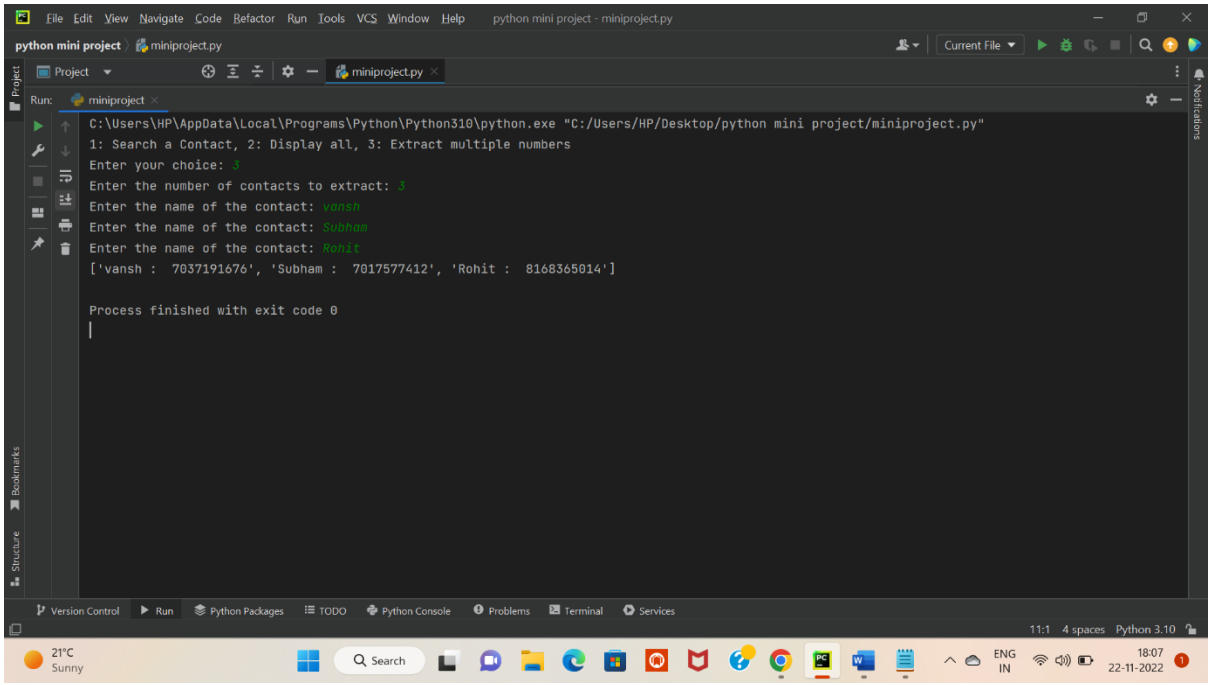
In output if we type 1 then we get a single student number which we want to search as shown in figure:-



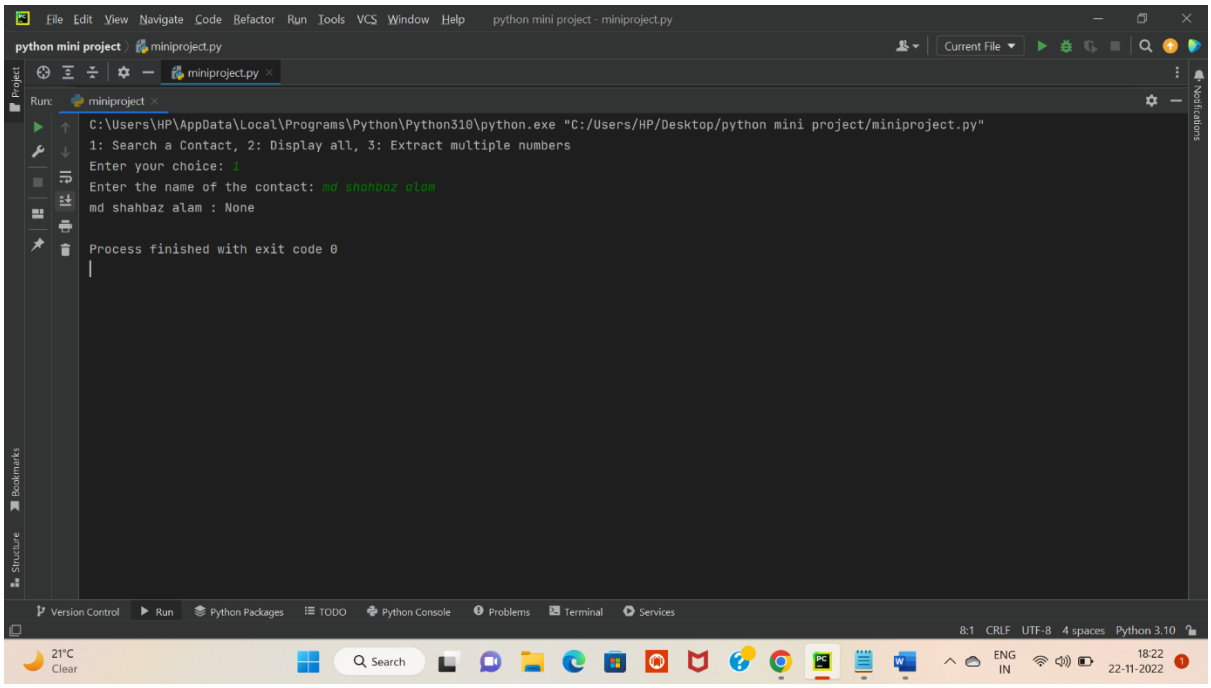
In output if we type 2 then we get all student's phone number as shown in figure:-



In output if we type 3 then we have to write how many student's number we want after that we have to search their name as shown in figure:-



In output if we write wrong name then we will not get any phone number there we get None as shown in figure:-



THANK YOU
